

Quality and Energy Management

PPF Projektentwicklung, Projektbetreuung Formenbau GmbH & Co. KG, Leipzig, has the DIN EN ISO 9001:2008 and DIN EN ISO 50001 certification. [DIN EN ISO 9001:2015](#) and [DIN EN ISO 50001](#).

By applying our **quality management system** consistently across all our sections in a transparent manner and applying it throughout the duration of the project, we ensure that you, as our customer, receive a quality product. That product will be of proven high-quality design, reasonable in price and, it goes without saying, perfect in form.

We have a fully functional **energy management system** that means our company fulfils its environmental obligations and achieves systematic continuous improvement on this front.

A slim-line, efficient, **integrated management system** that is uniform in structure has enabled PPF to apply methodology and tools to meet the demands of quality and energy. The system draws together resources and makes good use of synergetic effects.

It is you, the customer, who sets the standards - we fulfil them for you.

We have excellent measuring and testing instruments available in our quality assurance section. With them, our qualified staff ensures that all products reach and maintain the same, reliable, high level of quality.

The equipment enables us to complete the entire tool commissioning process in house, particularly (by agreement with our customer) the first-off inspection reports and relevant documentation.

Environment

PPF is a company which fully meets all ecological regulations, carries out its processes without wasting resources and is constantly reducing its impact on the environment.
